# Fiberscope

Fibervision  
+ SONY DV

## INTRODUCTION

The release of Fibervision was very sensational and accepted by various people, like private detectives, law enforcement agent and police officers. Using plastic fiber we succeeded to maintain its high quality, flexibility and light weight. More than that, it is inexpensive comparing to glass fiber used for industrial purposes.

Image is much different from that of CCD camera. When you use fiberscope with video camcorder, you can see fibers on the screen also. Be sure basically the fiberscopes are used to take a close picture.

## SPECIFICATION
